[UNSIGNED] Service by [REDACTED] on 04/18/2024

04/18/2024 11:15am

The patient expresses concerns about toxins binding to genes and influencing gene expression, affecting mitochondrial function and oxidative stress. They are interested in health optimization and preventing future health issues. The patient has been found to have a couple of toxins, including hexamethylenediol and benzoate, with one of the toxins bound to a tumor suppressor gene. They also have several mold toxins, such as aflatoxin, fuminosin, and fungisterol, as well as heavy metals like chromium 6 and cadmium. Lindane, a pesticide, mercury, phthalates, and nitrosamine are also present.

The patient reports a history of undergoing stem cell treatment, IV treatments, ozone therapy, and NAD therapy. They mention having two herniated discs in their back, which were treated with stem cell therapy. The patient's NAD test came back normal. They have been using a sauna and are interested in red light therapy.

Diagnostic Test Results:

- Toxin panel identified presence of hexamethylenediol, benzoate, aflatoxin, fuminosin, fungisterol, chromium 6, cadmium, lindane, mercury, phthalates, and nitrosamine.
- Elevated levels of circulating tumor cells and cell-free DNA noted.
- NAD test results came back normal.

PATIENT PAST MEDICAL HISTORY:

- * Herpesviral [herpes simplex] infections - HSV1 antibodies positive on labs
- * Other long term (current) drug therapy -
- * Gastro-esophageal reflux disease without esophagitis -
- * Benign prostatic hyperplasia with lower urinary tract symp -
- * Hyperlipidemia, unspecified -
- * Hormone replacement therapy -
- No PMH Note on File -

PATIENT ALLERGIES:

- * NKDA:

CURRENT MEDICATIONS:

- * TESTOSTERONE CYPIONATE (200MG/ML Other): Inject 0.5mL Intramuscular Weekly
- * OMNITROPE (5.8MG Other): Inject 20 units (0.2mL) SQ QHS 5 days on 2 days off.
- * PREGNYL (10000UNIT Other): Inject 1,000 units SQ twice weekly
- * MOUNJARO (5MG/0.5ML Other): Inject 5mg SQ once every other week
- * ANASTROZOLE (1MG Other): TAKE 1 TABLET BY MOUTH ONCE A WEEK

CURRENT SUPPLEMENTS:

- * Superbeets Sport (QD (once a day)) - one serving mixed with 4-6 oz of water 20-30 minutes before exercise
- * NEO 40 (QD (once a day))
- * (DFH) Homocysteine Supreme 120 caps (Designs for Health) (QD (once a day))
- * Glycocalyx Pro (Ortho Molecular Products) (QD (once a day))
- * Glutathione Recycler (APE949) (Apex Energetics, Inc) (QD (once a day))
- * Neo40 Pro (HUM) (HumanN) (QD (once a day))
- * (PUR) Alpha Lipoic Acid 600mg 60caps (Pure Encapsulations) (QD (once a day))
- * DHEA 25mg (DFH) (Designs for Health) (QD (once a day))
- * (BRC) Biomega 1000 90 Softgels (Biotics Research) (QD (once a day))
- * Liposomal Ultra Vitamin (QSL) (Quicksilver Scientific) (QD (once a day))
- * Probiotic 50B (PUR) (Pure Encapsulations) (QD (once a day))
- * (DFH) Vitamin D Supreme 180caps (Designs for Health) (QD (once a day))
- * EGCg (DFH) (Designs for Health) (QD (once a day))
- * Magnesium Buffered Chelate (DFH) (Designs for Health) (QD (once a day))
- * (AM2) PhosChol PPC 900mg 100 Capsules (NutraSal) (QD (once a day))
- * (DFH) Digestzymes 180caps (Designs for Health) (QD (once a day))

Vitamin C

PHYSICAL EXAMINATION:

Deferred due to nature of visit.

BP from 02/08/2024: 124/90 - Pulse 73

Weight: (165 lbs) (74.84 kg) (taken: 02/08/2024)

Height: 69 Inches (175.26 cm) (taken: 02/03/2021)

- * Benign prostatic hyperplasia with lower urinary tract symp (N40.1 - ICD10)
- * Gastro-esophageal reflux disease without esophagitis (K21.9 - ICD10)
- * Herpesviral [herpes simplex] infections (B00 - ICD10)
- * Hormone replacement therapy (Z79.890 - ICD10)
- * Hyperlipidemia, unspecified (E78.5 - ICD10)
- * Other long term (current) drug therapy (Z79.899 - ICD10)

Toxin Exposure and Gene Binding Management

- Assessment: The patient has been exposed to various toxins, including hexamethylenediol and benzoate binding to tumor suppressor genes, mold toxins (aflatoxin, fumonisin, and fungisterol), heavy metals (chromium 6 and cadmium), and other toxins such as Lindane, mercury, phthalates, and nitrosamine.
- Plan:
- Utilize ozone therapy for toxin removal.
- Implement extracorporeal blood oxygenation and ozonation (EBO2) treatment.
- Administer oral binders, such as Quicksilver UltraBinder.
- Provide liposomal glutathione for antioxidant support and toxin binding.

Mitochondrial Dysfunction Management

- Assessment: The patient exhibits low mitochondrial membrane potential and numbers, as well as high mitochondrial clumping and damage to outer and inner mitochondrial membranes.
- Plan:
- Employ EBO2 treatment to improve mitochondrial function.
- Administer IV phosphatidylcholine therapy for cellular function normalization.

Elevated Circulating Tumor Cells and Cell-Free DNA Management

- Assessment: The patient has elevated circulating tumor cells and cell-free DNA.
- Plan:
- Conduct RGCC test (OncoDeclare and Oncotrace) for further investigation of potential cancer cells.

Detoxification and Health Optimization Management

- Plan:
- Utilize infrared sauna use 3-4 times per week (Sunlighten Impulse).
- Discuss red light therapy.

Previous Stem Cell Treatment and Ozone Therapy Management

- Plan:
- Monitor NAD levels and effectiveness of previous ozone treatment.
- Retest after completing three therapies to assess toxin removal.

Cancer Testing and Prevention Management

- Plan:
- Set up cancer testing (OncoDeclare and Oncotrace) once available for ordering.
- Monitor results and adjust treatment plan accordingly.

This report was created by computer voice-recognition system. There may be errors in spelling, sentence structure, word selection, word omissions or additions. Please call our office 941-217-2777 if you have any questions regarding report content. The patient was evaluated, and plan was established by Dr. Christopher Davis.

ASSESSMENT

- Prim. Benign prostatic hyperplasia with lower urinary tract symp (N40.1 - ICD10)
- Gastro-esophageal reflux disease without esophagitis (K21.9 - ICD10)
- Herpesviral [herpes simplex] infections (B00 - ICD10)
- Hormone replacement therapy (Z79.890 - ICD10)
- Hyperlipidemia, unspecified (E78.5 - ICD10)
- Other long term (current) drug therapy (Z79.899 - ICD10)
